General Information:

As part of an employers overall duty to carry out assessments in the work place the law requires employers to complete safety/risk assessment. This involves assessing the risks of using a substance and implementing any measures needed to control exposure to it. Most of the information that will be required to carry out the assessment will be found within this Safety Data Sheet.

General Information (Continued):

Other factors such as where the product will be used and the training level of those using the product will have to be determined by the relevant employer or assessor. If more than 5 people are employed, then as with other risk assessments, the assessment must be recorded and reviewed at suitable intervals. The Health and Safety Executive web site www.hse.gov.uk has a great deal of information on all aspects of health and safety including many free to download documents on the subjects. PLEASE NOTE :- This document is a Safety Data Sheet (SDS or MSDS) . It is not in itself an assessment. The information found in this Safety Data Sheet can be used when carrying out an assessment but it cannot provide all the information that will be required as this will be specific to each individual situation eg. limitations of the location where the product is to be used etc.

It should be noted that the full risk and hazard phrases detailed above (section 16 - other information) relate to Section 3 of the document, which lists ingredients used in the manufacture of this product. These do not represent the hazards associated with the use of this product. The hazard identification of this product is found in section 2 of this document and should be the basis of your risk management measures. This revision (10) is the final updated layout to conform fully with updated regulations.
